Cumulative Outcome by Round

Interpretation: What is the probability that a combat will be in a certain state after a given round?

Non-cumulative Outcome by Round

Interpretation: What is the probability that a combat will end (in success or failure) in a given round?
(The probability of remaining undetermined is a cumulative value and is given for reference.)

Non-cumulative Outcome Ratio by Round

Interpretation: If a combat has reached a given round, what is the probability that it will end in success or failure, or remain unfinished after that round.
